

CYLINDER RETAINER

REQUIREMENT FROM THE SWEDISH CONSUMER AGENCY

Date: 11/05/2019

Regarding the Swedish Consumer Agency's market investigation

The Swedish Consumer Agency has decided on a requirement for all inflatable lifejackets to be equipped with a cylinder retainer, this requirement applies for all brands/actors on the Swedish market.

The requested solution is a standard feature on all inflatable lifejackets manufactured by BALTIC Safety Products AB, therefore **products from BALTIC will not be affected by the recall from the Swedish Consumer Agency.**

All Industrial range inflatable lifejackets manufactured by Baltic Safety Products AB from 01/02/2013 onwards and all other inflatable lifejackets manufactured by Baltic Safety Products AB from 01/09/2013 onwards are fitted with a cylinder retainer (see pictures) to prevent the CO₂ cylinder from working loose during use. According to our service instructions all inflatable lifejackets shall be serviced once every year, alternatively, a self-check can be performed according to our instructions available at www.baltic.se. If the annual service/inspection has not been done since 2013, please contact one of our service stations or us at Baltic to service the lifejacket and get a retainer mounted free of charge. If you are uncertain about this please contact customer service at +44 2380 457272 or email sales@baltic-uk.com

Cylinder retainer is a standard feature on BALTIC products since 2013.
